Profile

Hi! I am Beatrice and I am an organized person. I'm always creating new ideas, new ways of doing things and I'm self-motivated, hard-working individual. I like to dance, to walk my dog, to paint, to do sports and to experience new activities. Also , I've been trying to improve my programming skills for the couple of months in order to become a web developer

Creative Works

Bachelor Degree Project, Cluj-Napoca

February 2020 — December 2020

- for my senior thesis i wanted to recondition and improve the interface of the existing site of my University, as well as to achieve a better functionalty of the electronic catalogs.

- to create the interface i used HTML,CSS and for functionality , i used JavaScript and JSON data.

- the creation of the site was done using VisualCode and involved the following steps: creating a modern interface, easy to understand and access by the user, with clear elements to facilitate navigation within the app , protection of personal data by presence of the two factors login page, the connection between the local JSON data server and my app, so that we can edit the fields of notes specific to each student, as well as save those changes via a button. At the same time, by using the Bootstrap framework , i've managed to create a dynamic site, with responsive elements, which changes its order / dimensions depending on the size of the display, so regardless of the device the app is accessed, the site will display a clean interface. Also, the navbar , when the dimension of the display is medium or small, becomes a droplist.

Experience

Practice , S.C. ROBERT BOSCH SRL, Cluj-Napoca

July 2019 — August 2019

- START Project

- MFC-t department
